

Software for access control

SDP Era pass-IT

SDP Era pass-IT is an electronic key, which manages the access control within your company. Each employee is granted access to certain areas by means of his encoded badge, whether or not within a certain time span. You can verify in realtime who is where at any time. SDP Era pass-IT operates perfectly as an independent application but it also fits into the complete Era picture: SDP Era time-IT (time registration), SDP Era plan-IT (timetable planning) and SDP Era job-IT (job follow-up).

SDP Era pass-IT secures access to your premises

Each business has certain areas which are not accessible to everyone: the storage room of hazardous goods or medicines, the server room, the director's office, ... With SDP Era pass-IT you create delimited areas within a company and determine for each individual employee or external visitor to which area(s) and at what time he has access. It is even possible to refuse entrance to an area before having passed another point of registration first.

Detailed overviews

The presence board shows at a glance who is where in a building. This can be of vital importance in the event of a fire or urgent evacuation. The software offers the possibility to consult the history of badges that have registered at any terminal. Registrations can be consulted and visualised in realtime, so the system manager keeps track of authorized or unauthorized accesses. All accesses can be configured from the software. Once they are configured, the hardware autonomously decides who is granted access when and where.

SDP offers a global solution

SDP develops all software in-house and fully understand your requirements for specific solutions. That's why SDP not only provides powerful software. Also for hardware and the corresponding services such as installation, training and consultancy you can turn to SDP. SDP Era pass-IT links perfectly with other Era modules (SDP Era time-IT, SDP Era plan-IT and SDP Era job-IT) in the same environment which makes double input redundant.
